**Predictive Services Discussion:** Locally breezy winds will continue across portions of the Pacific Northwest, as a cold front and upper level disturbance make their way inland with a chance of showers. Ahead of this front, isolated thunderstorms will develop over the Great Basin; while hot and dry weather will persist over California and the Desert Southwest. A strong upper level low pressure system and associated cold front will continue to focus showers and thunderstorms from the southern Plains northeastward through the Upper Midwest. The Gulf Coast states will also see showers and thunderstorms.

## IN COUNTRY NOT SEEN IN DAYLIGHT

*Operational Engagement Category*

Often firefighters arrive on a fire after dark. This is recognized as Watchout Situation #2. Before safely fighting fire in country not seen in daylight, firefighters must be able to answer the following questions:

- Can the resources you are replacing give you a thorough briefing? Identify whom you might get information from. Can you meet up with the departing overhead/resource leaders?
- Can you observe the area/use scouts? List ways you could observe the area you need to work.
- Have escape routes and safety zones been thoroughly scouted and marked for night use? Talk about what constitutes an escape route and a safety zone; who would identify them; and in what ways might they be marked.
- Have potential dangers been located; can they be mitigated? What are the dangers associated with Watchout Situation #2? How can they be worked around?
- Reduce the risks by:
  - Posting lookouts.
  - Checking communications.
  - Retreat if you have doubts about your escape routes or safety zones or the situation becomes too complex. Give examples of arriving on a fire after dark and what was done to allow you to fight fire safely in country not seen in daylight.
  - Identifying prominent geographic features
